

The Bike-Shell™ solution

Model 301V VERTICAL BIKE PARKING "HOW TO" GUIDE

The **301V (Vertical) bike locker** has been designed to be extremely easy to use. No great strength is necessary. Just tilt the bicycle back so it rests on its back wheel, roll it into the locker so that the back wheel settles comfortably between the molded blocks, let the bike balance forward until it passes its center of gravity and the front wheel rests on the back wall of the locker. The bike will stay in this position without hanging, straps or any other securing devices. Just close the door, lock it and forget it. There is ample room for storing helmets, jackets, back-packs etc. See the illustrated steps below.

1. Stand bike on rear wheel

2. Roll into locker

3. Let front wheel tip forward

4. Close and lock door

Bike rests securely with its rear wheel held in place by the wheel blocks on the bottom and gravity keeps it in place at the top. With the door closed and locked, there is no place for the bike to go.
